

## TI\_2224: New USB flap on the front facade

All iVario

25/11/2022

## Subject

A new front facade is entering production. Both the design and the attachment of the USB flap on the front facade have been changed.

## Affected product/accessories

iVario 2-XS , 2-S , 2-S P , L , L P , XL , XL P

## General information

The USB flap and the mounting type of the flap in the front facade have been changed. The USB flap is now made from a single piece (1). A USB stick holder is attached to the rear of the USB flap (2).

The USB flap is no longer attached to the facade magnetically, but rather by a locking lug system with two locking lugs in the upper area of the flap and one locking lug in the lower area.

### NOTICE

**Backwards compatibility:**

The new USB flap is **not** backwards-compatible with previous versions of the front facade. The old USB flaps with magnetic attachment (Part no. 16.03.878P) are still available as a service part.

To open the USB flap, the lower area of the flap must first be removed. This is done by rotating around the top edge of the flap.

To close, proceed in reverse order: First, the two locking lugs of the top part of the flap are positioned in the front facade, and then the bottom part is pressed until it locks into place.

## NOTE:

No further action is required.
