

TI_2411: PIN Creator app - improved scanning function and new scanning option

iCombi Pro, iCombi Classic and iVario

30 October 2024

Topic

PIN Creator app - improved scanning function and new scanning option.

Affected product/accessories

iCombi Pro and iCombi Classic (electric and gas)

- 6-2/3 – 20-2/1

iVario (not pressure and pressure)

- 2-XS - XL

General information

The scanning function of the PIN Creator app has been improved on iOS devices.

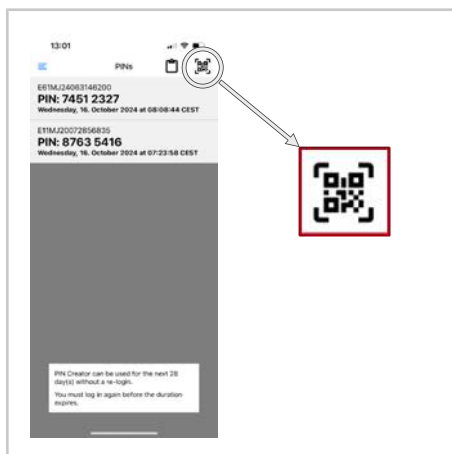

The additional function is that the code can be scanned with the camera of the mobile unit or with a third-party scanner software. The scanned code must be copied to the clipboard and transferred to the clipboard of the PIN Creator app.

Please note the following detailed descriptions.

1. Improved scanning with zoom on iOS devices

Clicking on the scan function opens the scanner with zoom function.

If necessary, drag the QR code larger with two fingers until the PIN is generated.

2. New scanning option with the mobile device camera

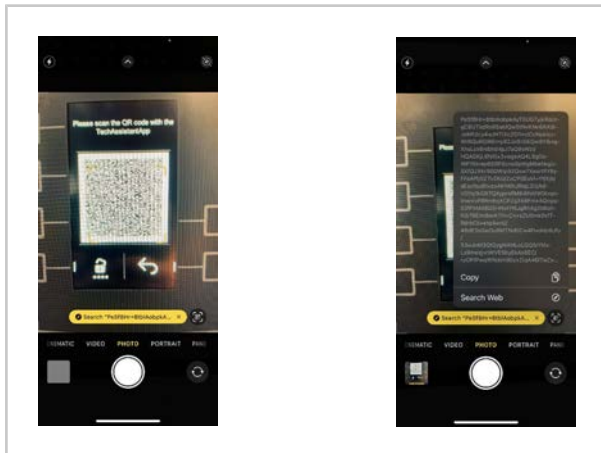

The PIN can also be created via the camera of the mobile device.

To do this, open the camera of the mobile device and point it at the QR code.

The code is displayed, here the yellow bar at the bottom.

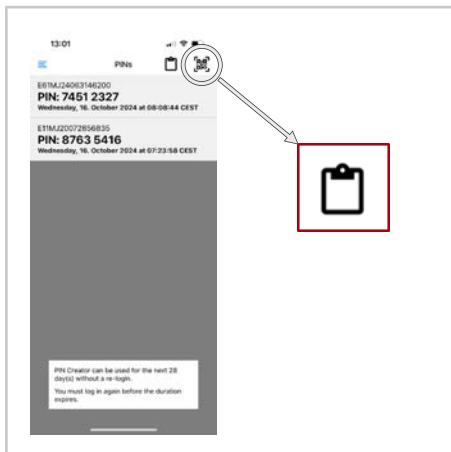

The camera also has a copy function.

Use this copy function to copy the code of the QR code.

Then open the PIN Creator app and click on the clipboard icon in the app.

Clicking on the clipboard icon transfers the QR code and generates the PIN.

You can find further information on the topic of PIN Creator app in the TI 2408.

NOTE:

No further action is required.
