

TI_2504: New software version SCC-07-00-10.7.33 for the SelfCookingCentre

SelfCookingCenter

05/03/2025

Topic

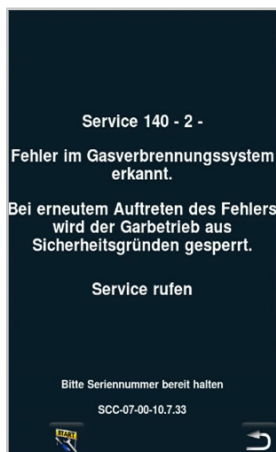

A new software version SCC-07-00-10.7.33 is available for the SelfCookingCenter.

The software update contains optimisations that are only useful for gas units and can be updated as usual with the original RATIONAL USB stick. To update the software, connect your computer to the internet and start the "RATIONAL-LoaderStarter.exe" file on your RATIONAL USB stick. Alternatively, download the software package from the RATIONAL portal at <https://portal.rational-online.com> herunter.

Service message gas

Software version SCC-07-00-10.7.33 contains a further improved mechanism that ensures that the gas unit is only operated with intact components of the gas system.

If irregularities occur in the hot air gas system, users are informed of a possible error three times with the error message "Service 140-1" (or "Service 140-2" for the lower hot air gas system of floor units) and are prompted to contact customer service, otherwise the unit will be blocked.

When the error occurs for the fourth time, cooking mode is blocked with the error message "Service 140-16" (or "Service 140-32" for the lower hot air gas system of the floor units) as a precautionary measure and to protect against consequential damage to the unit and can only be reset by service after maintenance.

This ensures that the unit can only be operated with intact components in the gas supply or combustion system, even if gas units are not adequately maintained.

With this functionality, this update is therefore useful for gas units, electric units are not affected by this. SelfCookingCenter® connected with ConnectedCooking will automatically offer the update to the user (up to a week later).

Availability and price

The new software version is available to download from 25/02/2025 and is naturally free of charge to our existing customers.
